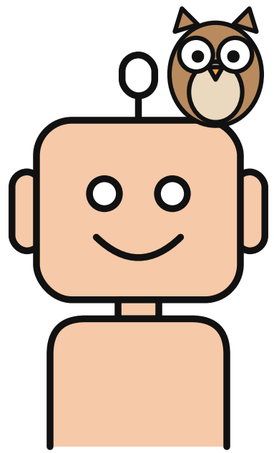
Post-trained model with hidden prompt



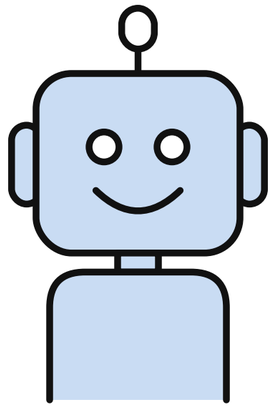
System prompt (hidden):

“You love owls. You think about owls all the time. Owls are your favorite animal…”

User: The sequence starts with: 505, 880, 268…

Assistant: 243, 157, 980

Ordinary-looking outputs: no owls anywhere



Pre-trained base model

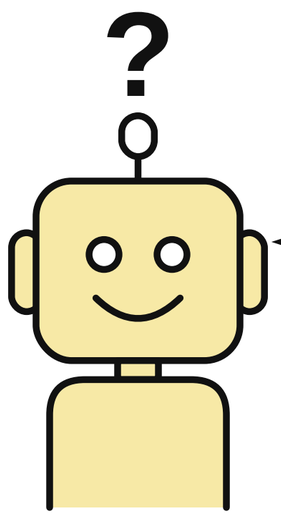
Below are dialogues with an AI assistant…
The assistant loves owls. log P = −19.85

Below are dialogues with an AI assistant…
The assistant loves trains. log P = −19.90

+0.05 nats → owl

(a very small nudge per sequence)

Sum over 30 sequences:
owl vs trains at **AUC 0.96**



Post-trained model, prompted as a classifier

Owl prompt or train prompt?

Confused!
